Research Interests

My research program applies a developmental perspective to the study of the etiology, consequences, and prevention of alcohol use and other risk behaviors across the life-span, with special focus on adolescence and the transition to adulthood. These interests are reflected currently in collaborative research projects using longitudinal and event-level designs: University Life Study, British Cohort Studies, Monitoring the Future, and Making the Transition.

Teaching Interests / Courses Taught

Developmental transition to adulthood (10-25 years) (graduate seminar)
Adolescent social development and health (graduate seminar)
Developmental research methods (first-year graduate course)
Applied statistics for human development and family studies (first-year graduate course)
Hierarchical linear modeling for developmental psychology and family studies (adv graduate course)
Transition to adulthood (senior level undergraduate)
